Report Generator Module

The Report Generator module of Softland is a tool designed to integrate with the other modules of ERP, enabling the creation, modification and printing of customized reports based on the information stored in the Softland ERP database.

Unlike other similar products in the market, this module provides end-users with an assistant that recognizes the entities and business logic of Softland ERP, allowing them to easily generate their own reports, without requiring high technical knowledge. The module offers advanced options for the more technical users that can be used according to their needs.

Features:

- This allows for the creation, modification and printing of reports with help of an assistant, which facilitates:
  - Generation of value lists in an intuitive way, without requiring technical expertise in databases
  - Grouping and/or filtering according to the variables, in a flexible and configurable manner
  - Adding calculations in the briefings for each group
  - Using the different formats with combinations of colors and preset styles
  - Automatic creation of report options within the menu
- It is compatible with Microsoft Excel for the transfer of data.
- Allows you to configure the access to the reports from the maintenance and menu options you wish.

- The reports are integrated into ERP's tree of security, offering security when users access each option.
- Possibility of modifying reports with an advanced reports designer, with multiple options in graphics, advanced filters, images and even bar codes.
- Management of security in the reports when users need to print.
- Recognizes dozens of models of preset data, which facilitates the extraction of data.
- Allows you to create reports from SQL queries, in the event that the combination of records is not available in the models of the pre-set data.
