

Softland ERP Management Area//

Softland Analysis Module

Softland Analysis is the ideal complement for those companies that use Softland ERP and are interested in making a dramatic improvement in the measurement of their results, with a user-friendly and versatile tool.

Features:

- **General Module:** Allows you to manage, upload, view and explore the different budgets to manage the company's performance and efficiency. Works in a fully online environment.
- **Analysis Views:** A series of analysis views enable the exploration from various angles such as finance and trade, among others. These are installed on the database server. With Softland analysis it is possible to develop views according to your needs, which remain fully integrated to the solution. It is also 100% scalable and can incorporate new views as required.
- **Cubes of information:** For companies with high volumes of information, our solution allows you to connect to pre-configured cubes of information that are external to the transactional database. This will allow both short- and long-term analysis.
- **Result evaluation:** Softland Analysis allows you to evaluate the efficiency and performance of your company from the various budgets created.
- **Direct integration with Microsoft® Office Excel:** Allows uploading budgets and the use of different versions of Excel.
- **The analysis are displayed through panels of information that are 100% visual** and can be explored through pivot tables.
- **Pivots by area:** In addition to the traditional pivots of sales and accounting, Softland analysis provides information on a wide range of elements, such as purchasing, inventory, human resources, production orders, accounts receivable and fixed assets, among others.
